

CARING FOR YOUR NEW TABLE

Wood top or painted tables require special attention.

To clean you may damp-wipe but follow immediately with a thorough soft-cloth drying. Do not leave water on table top for any reason, or it will soften the wood and finish. Sweating drinks, hot drinks or hot dishes should have a trivet or coaster beneath them.

Periodically feed the wood with orange oil or feed-n-wax.

Do not use harsh chemical cleaners or abrasive cleaners.

Tin top tables need care too! No cutting on surface, and keep top dry after damp wiping

No harsh chemical cleaners on any table top!

Very dry environments can require more frequent feeding with oil

Pledge is not a good furniture polish- it is too abrasive!
